PegasusTSI's commitment to provide a Safe working environment is at the core of our operational values. PegasusTSI believes that accidents/incidents are preventable, and we continuously strive toward a "Zero Incident" culture. We believe that positive Health, Safety and Environmental (HS&E) performance initiatives are good business practice that benefit employees, customers, and neighbors wherever we do business.

Safety isn't just an adherence to regulations; it's a way of approaching our personal lives and doing business.

WORKPLACE SAFETY

At PegasusTSI, we strive to protect the environment as well as the health and safety of employees, contractors and customers at our engineering offices and plant sites. Our goal is to be identified with the best in the industry.

HS&E RISK MANAGEMENT

Risk management includes identifying risk reduction opportunities, complying with legislation and standards, and making line management accountable. PegasusTSI implements its risk management by

including HSE competencies and performance in staff appraisals and rewards; by providing HSE education and by training; measuring, appraising and reporting HSE performance; conducting compliance audits; and requiring contractors and suppliers to comply with our requirements.

OPERATIONAL & CLIENT SAFETY

Safety is an integral part of PegasusTSI's engineering designs from the earliest stages of concept development through Detailed Engineering to the completion of construction. All projects incorporate good engineering practices as well as the application of risk management protocols, structured HAZOP analysis, SIL analysis and safe construction programs. PegasusTSI's goal is to deliver a well designed, safe-to-operate facility to our customers.
